Important Update: Enhanced Security for Online and Mobile Banking

To further protect your accounts from fraud and unauthorized access, we have recently implemented a new cybersecurity feature on our online and mobile banking platforms. This additional layer of protection, powered by advanced technology, is designed to ensure that the person logging in is a genuine user and not a bot attempting to gain access through automated or scripted attacks.

If you log in to online banking via a desktop computer or mobile app (without using biometric ID), you may have noticed a new verification step during the login process.

In the majority of cases, this verification will be completed behind the scenes, requiring no additional action from you. In some cases, you may be asked to check a box to confirm that you are a real person logging in on a valid device. However, in a very small number of instances, you might encounter a verification error. This means the system was unable to verify your login attempt.

If you receive an error, here are some common tips for how you may address the situation:

- Restart your browser or close and re-open the mobile app.
- Clear your cache and cookies.
- Update your browser to the latest version.
- Disable browser extension(s).
- Try logging in on a different browser.
- If you are using Internet Explorer, move to a supported browser.
(Google Chrome, Microsoft Edge, Safari, or Mozilla Firefox).
- Ensure you are not behind a VPN or proxy. Especially, public or shared VPNs or proxies such as ExpressVPN, NordVPN, etc.
- If on a desktop computer, try logging in on our mobile app (and set up biometric ID).
- Scan your computer for viruses and malware that may be impacting your device's security profile.
- Uninstall and Reinstall the mobile app on your phone.
- Try logging in from a different computer or device.
